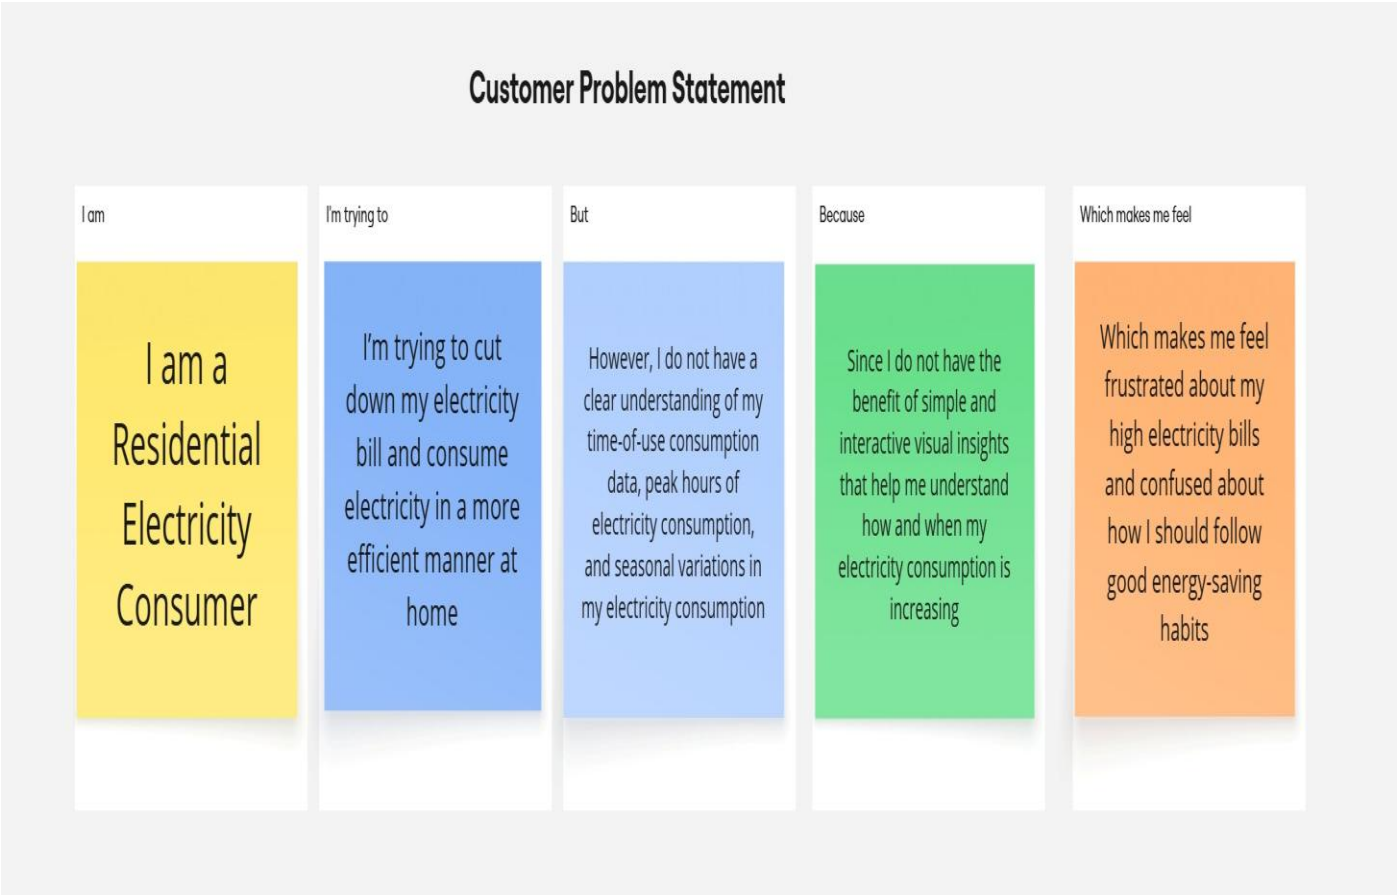
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns Using Tableau
Maximum Marks	2 Marks

Customer Problem Statement Template:

The customer problem statement focuses on understanding the challenges faced by a college student in managing electricity consumption and monthly expenses. Due to a lack of clear insights into time-of-day usage patterns and seasonal variations, the student struggles to identify peak consumption periods and control electricity costs. This highlights the need for simple, interactive data visualizations that help students make informed and energy-efficient decisions.



Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am a Residential Electricity Consumer	I'm trying to cut down my electricity bill and consume electricity in a more efficient manner at home	However, I do not understand my time-of-use consumption patterns, peak hours of electricity consumption, and seasonal variations in electricity consumption	Since I do not have the ability to access simple and interactive visual insights that can help me understand how and when my electricity consumption is increasing	Which makes me feel frustrated about my high electricity bills and confused about how I should change my energy-saving habits
PS-2	a hostel student sharing a room with my classmates	I'm trying to fairly manage and split our monthly electricity expenses without conflicts	But we don't know which appliances or usage habits are increasing our electricity consumption the most	Because we don't have clear visibility into our daily usage patterns or peak consumption times	Which makes me feel confused during bill payments and worried about arguments with my roommates over high electricity charges
